

Asbestos

know your building, know your duty.

Asbestos can be present in any building built or refurbished before 2000.

If damaged, fibres are released into the air which are harmful if inhaled. Exposure can lead to diseases which cannot be cured.

Managing a building

It's a legal requirement to manage asbestos in non-domestic buildings.

- Find out where it is
- Assess the condition and risk
- Make an asbestos management plan

ASBESTOS YOUR DUTY

Maintenance and repair

Download the quick guide for trades or see asbestos essentials for step by step.

- What it looks like
- Where you might find it
- What to do when you come across it

ASBESTOS & You
